Compressed Earth Blocks | EMI

A compressed earth block (CEB), also known as a pressed earth block or a compressed soil block, is a building material made primarily from damp soil compressed at high pressure to form blocks. Compressed earth blocks use a mechanical press to form blocks out of an appropriate mix of fairly dry inorganic subsoil, non-expansive clay and aggregate.

Compressed Earth Block Machinery For The World

Through the work of AECT, compressed earth blocks have become a viable building material that can be mass-produced to high technical standards. AECT's portable, self-contained CEB machines allow builders to produce compressed earth blocks on site, reducing cost and carbon footprint for both residential and commercial construction.

Powell & Sons Pressed Earth Machines

A Compressed Earth Block (CEB) is created when you take subsoil, clay, aggregate (and sometimes Cement or Lime), and compress the ingredients under massive mechanical pressure of around 3000psi. This result is that the block's volume is cut in half, and that a litteral building block (or brick) is produced.
