WEB DESIGN PRINCIPLES. Web design is not only about how the website looks and feels but is also a lot about how it works and responds. When web designers work on a website, they incorporate not just those elements that add a visual appeal to it but also try to make it highly responsive, functional, quick and useful. In order to create a highly usable and effective website, designers follow certain principles that act as thumb rules or standard points to keep in mind.

One of the main goals of a good and effective structural design is to decrease, as far as possible, the self-weight of structures, because they must carry the service load. This is especially important for reinforced concrete (RC) structures, as the self-weight of the material is substantial. For RC structures it is furthermore important that the whole structure or most of the structural ...
